

## Part 1: To develop a website and host on Xampp

Step 1: Visit the official XAMPP website. Choose the appropriate version that matches your operating system, and download the compatible installer.

Step 2: Once the installation is complete, open the XAMPP Control Panel. Start the Apache server by clicking on the "Start" button next to "Apache."

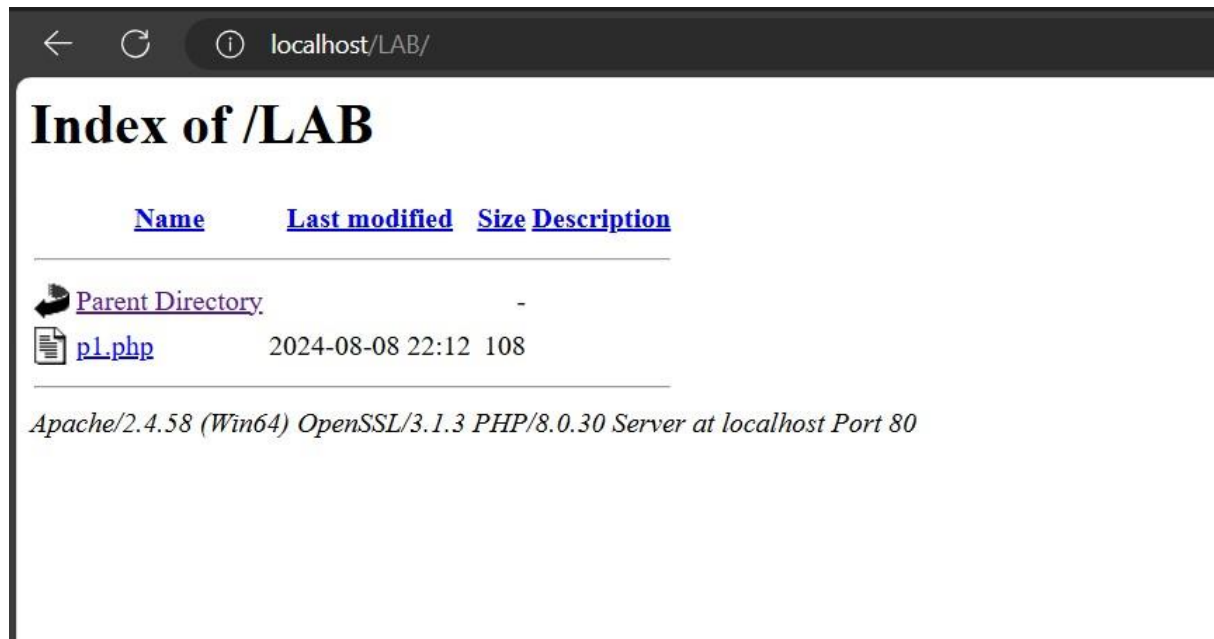

Step 3: Create a new PHP project file and save it in the "htdocs" folder, which is located within the XAMPP directory

```
File Edit View

<html>
<head>
<title>First PHP Program</title>
</head>
<body>
<?php
echo "This is advDeveops lab";
?>
```

Step 4 : Start the XAMPP server and access your project. Go to your browser and navigate to localhost/filename.php to view your PHP file's output.

Output:
